

TVS SHIPPING CORPORATE PROFILE

Global Tank Storage & Multi-Modal Logistics

Engineering the future of bulk liquid storage
& logistics through uncompromising safety,
absolute precision, and seamless global
connectivity.

INTRODUCTION

TVS Shipping is a premier tank storage infrastructure partner positioned strategically across the world. We serve as a critical logistics gateway, seamlessly bridging the gap between international maritime routes and deep European hinterland markets.

Operating over 1.45 million cubic meters of highly adaptable storage capacity in various locations, we engineer the future of global supply chains.

INDUSTRY OVERVIEW

TVS Shipping operates at the forefront of the global liquid-bulk logistics sector, connecting the world's energy, petrochemical, and sustainable fuel markets through massive tank storage, efficient maritime handling, and extensive inland distribution. Headquartered at our flagship deep-water gateway in the Port of Antwerp, we seamlessly integrate high-capacity storage with comprehensive rail, road, barge, and pipeline connectivity, further enhanced by value-added services such as advanced in-tank blending, precise temperature control, and fully compliant bonded warehousing. Beyond this European anchor, we orchestrate a formidable, high-throughput terminal network spanning the most vital global trade routes, with strategic hubs in Rotterdam, Houston, Fujairah, Singapore, and China.

Our Services

End-to-end liquid-bulk logistics solutions powered by infrastructure, expertise and commitment.

TANK STORAGE

Safe, secure and compliant storage for a wide range of liquid bulk products.

MARITIME HANDLING

Efficient vessel operations and terminal services for seamless port handling.

MULTIMODAL TRANSPORT

Reliable road, rail and barge connectivity for flexible and on-time delivery.

PRODUCT TRANSFER

Advanced infrastructure for safe and efficient transfer of liquid bulk products.

CUSTOMER SUPPORT

Dedicated support and real-time coordination to keep your operations moving.

TERMINALS & INFRASTRUCTURE

TVS Shipping NV operates secure, high-capacity liquid-bulk terminals in the Port of Antwerp, combining world-class storage, advanced infrastructure and seamless connectivity across multiple transport modes.

SECURE LIQUID-BULK TERMINALS

State-of-the-art terminals designed for the safe handling of oil, chemicals and other liquid-bulk products.

TANK STORAGE

High-capacity tank farms with advanced safety systems and environmental protection.

JETTIES & MARITIME ACCESS

Deep-water jetties enabling efficient loading and unloading for vessels of all sizes.

PIPELINE CONNECTIONS

Extensive pipeline network for fast, reliable and secure product transfer.

MULTIMODAL ACCESS

Direct access to road, rail, barge and pipeline networks for seamless end-to-end logistics.

FLEET & TRANSPORT NETWORK

A fully integrated network connecting global supply with local delivery.

From ocean terminals to inland waterways, rail systems and road transport, we move liquid-bulk cargo safely, efficiently and on schedule.

MARITIME FLEET

Seaborne transport with specialized tank vessels for global reach.

INLAND BARGES

Reliable inland waterways connectivity for port-to-hinterland distribution.

RAIL TRANSPORT

Secure and efficient rail solutions for bulk liquid cargo.

ROAD TRANSPORT

Flexible trucking network for last-mile delivery and regional coverage.

OCEAN TANK VESSELS

Global Capacity, Safe, Compliance, Reliable.

INLAND BARGES

Seamless flow through inland waterways.

ONE NETWORK.
ONE STANDARD.
DELIVERING
EVERYWHERE.

RAIL TRANSPORT

High-capacity, Long-haul, Dependable.

ROAD TRANSPORT

Agile, Responsive, Last-mile excellence.

CONNECTED

Integrated modes for seamless cargo flow.

RELIABLE

Safety, compliance and operational excellence.

EFFICIENT

Optimized routes. On-time delivery.

MOVING ENERGY.

DELIVERING TRUST.

Engineering the future of liquid bulk logistics.

Exploration

Production

UPSTREAM SECTOR

Exploration: Reliable infrastructure supports the movement and handling of energy-related commodities entering European markets.

Production: TVS Shipping provides storage and transfer infrastructure for clean petroleum products, specialty chemicals, renewable fuels and other liquid-bulk commodities, supporting supply-chain continuity from vessel arrival to onward dispatch.

MIDSTREAM SECTOR

The midstream sector connects upstream production to downstream markets through transportation, storage, and infrastructure development. This includes the operation of pipelines, marine terminals, tank storage facilities, and handling systems that move crude oil, refined products, and natural gas to processing centres and export points. Midstream logistics require precision scheduling, regulatory compliance, and robust infrastructure to maintain uninterrupted flow across complex supply networks.

Transportation – Deep-water jetties support high-capacity vessels, while automated truck gantries, rail links, inland barges and pipeline connections enable onward distribution.

Storage – The company states it operates more than 1,450,000 m³ of secure, climate-controlled liquid-bulk storage capacity.

Infrastructure Development – Facilities include dedicated pumping systems, manifold routing, temperature control, vapor recovery and in-tank treatment capabilities.

Operating as a premier logistics hub in Antwerp, we seamlessly link international maritime routes with deep European inland markets. Our advanced multi-modal infrastructure is engineered to eliminate handling complexity, accelerate high-volume product movement, and provide highly flexible routing for global energy and chemical supply chains. While our Antwerp headquarters drives regional efficiency through direct connectivity to the Central European Pipeline System (CEPS) and local refinery clusters, our economic impact is truly global.

«««« ECONOMIC IMPORTANCE

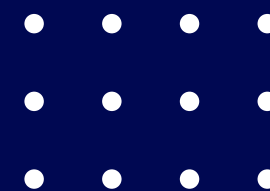

ENVIRONMENTAL AND SAFETY

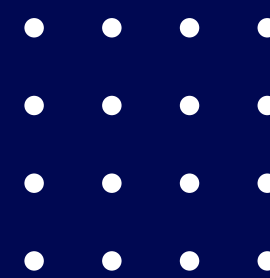

- **Environmental Protection:** We utilize advanced vapor-recovery systems (VRUs) meticulously designed ensure strict environmental compliance and minimal atmospheric impact.
- **Waste Management:** To maximize operational efficiency and reduce our environmental footprint, we deploy state-of-the-art pipeline pigging technology.
- **Emission Control:** Our infrastructure is equipped with precision climate-controlled tanks, dedicated emission monitoring systems, and stringent product-integrity protocols to guarantee the safe handling of highly sensitive commodities.

INDUSTRY CHALLENGES

Navigating the complexities of global liquid-bulk logistics requires flawless execution. We understand that maintaining absolute product integrity, exceeding safety standards, hitting strict emission targets, and ensuring seamless multimodal coordination are persistent industry challenges. We respond to these demands by equipping our facilities with fully automated operations, real-time inventory tracking, and dedicated pumping lines to eliminate cross-contamination.

CONCLUSION

As a premier integrated liquid-bulk infrastructure partner, TVS Shipping operates across a network of strategic global locations. By seamlessly combining highly secure tank storage, expert maritime operations, advanced product treatment, and comprehensive multi-modal distribution, we deliver safe, transparent, and resilient supply-chain solutions purpose, built for the complex demands of the world's energy, chemical, and renewable-fuel markets.
